

### DKT Contribution to Contraceptive Prevalence in Selected Countries in 2019

DKT Contribution to CPR by Country  
Program Officer > Contribution to CPR

**Note:** Countries are listed if DKT contributed 4 or more percentage points towards Modern Contraceptive Prevalence. To see the full list of countries, see the attached chart.

Adjusted CYPs exclude abortion-related CYPs and adjust the impact of IUDs and implants. Abortion is not included in DHS enumeration and is therefore excluded here. We have also adjusted CYPs for IUDs and implants to reflect current users and users from prior years, including a reduction of impact to account for users who may have stopped using the method.

Women of reproductive age is taken from the United Nations, Department of Economic and Social Affairs, Population Division (2018). Estimates and Projections of Women of Reproductive Age Who Are Married or in a Union: 2018 Revision. New York: United Nations.

mCPR data sourced from United Nations, Department of Economic and Social Affairs, Population Division (2017). World Contraceptive Use 2017 (POP/DB/CP/Rev2017)

Bihar's population and mCPR data sourced from Guttmacher (<https://bit.ly/2U4kLKP>) and the Lancet (<https://bit.ly/2uTVg55>), respectively.

★Kongo Central province has reported 20.9% mCPR among women married or in a union, but country-wide data is conflicting and inconclusive. The UN data in 2018 estimated that mCPR was 7.7%, while the FP2020 estimates it was 11%. Although we did not provide all the contraception in DR Congo over 2019, we present our annual contribution to mCPR at 100% because our sales results exceed mCPR and suggest this data is not up to date. To demonstrate the incongruity between our sales and mCPR statistics, we present the UN mCPR estimate (blue) and our calculated mCPR (red) side-by-side, rather than stacked. (<https://www.pma2020.org/sites/default/files/EN-PMA2018-KongoCentral-R4-FP-Brief.pdf>)

**DKT's 2019 estimated impact on modern contraceptive prevalence rate (mCPR) by country program**

Notes

- Adjusted CYPs exclude abortion-related CYPs and adjust the impact of IUDs and implants. Abortion is not included in DHS enumeration and is therefore excluded here. We have also adjusted CYPs for IUDs and implants to reflect current users and users from prior years, including a reduction of impact to account for users who may have stopped using the method.
- Women of reproductive age is taken from the United Nations, Department of Economic and Social Affairs, Population Division (2018). **Estimates and Projections of Women of Reproductive Age Who Are Married or in a Union: 2018 Revision**. New York: United Nations. (<https://bit.ly/2UukZzb>) (Gives information until year 2030)
- mCPR Data from United Nations, Department of Economic and Social Affairs, Population Division (2017). **World Contraceptive Use 2017 (POP/DB/CP/Rev2017)**
- Bihar's population and mCPR data sourced from Guttmacher(<https://bit.ly/2U4kLKP>) and the Lancet (<https://bit.ly/2uTVg55>), respectively.
- Kongo Central has reported 20.9% mCPR among women married or in a union, but country-wide data is conflicting and inconclusive. Because our sales figures are higher than the reported number of mCPR users, our percentage is listed as over 100%. (<https://www.pma2020.org/sites/default/files/EN-PMA2018-KongoCentral-R4-FP-Brief.pdf>)
- Includes bulk sales of IUDs to Egypt's Ministry of Health.
- The UN does not have recent data on mCPR on Saudi Arabia. Data sourced from World Bank (<https://bit.ly/2VuRlal>)
- Percent of contraceptive use from Somalia as a whole in 2006. Population of married woman taken from Somalia as a whole from a report made in 2018 projecting demographic trends. Data from Somalia was used because Somaliland does not have its own data from this source.
