A maternal death refers to the death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management but not from accidental or incidental causes.

**\*Method:** Using historical data on maternal deaths from 1990-2023, DKT created a trendline to estimate the number of deaths in 2025. The proportion of 2025 deaths to 2023 deaths is replicated across each country's data on MMR in 2023. These country estimates enable DKT to determine its contribution to countries with registered DKT sales.
